                                                                                                                                                                                                                                                                                                       cc -containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LER OT SAM domain Cf from it, and the polynucleotides encoding them. Also included are a crecombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian cand insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), cancers, abnormal cell death (apoptosis), autoimmune diseases or inflammation. In capacitation, the polypeptide and nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation. In capacitation, the polypeptide and nucleic acid are useful for treating capacitation cell proliferation in flammatory hyperplasia, fibrosis, smooth capacitation cell proliferation in arteries following balloon angioplasty carcinomas, sarcomas, melanomas, leukaemias, callengies, arthritis, lupus, schrogen's syndrome, Crohn's disease, callergies, arthritis, lupus, schrogen's syndrome, Crohn's disease, cancer disease, or immunodeficiency associated disease or Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-MAY-2000;

The Secreted polypeptides and polynucleotides are useful for treating CC nervous and muscular diseases, for inhibiting tumour formation and CC metastasis, for treating astrointestinal ulceration, for preventing CC and treating diseases in spinal cord, thyroid gland, ovary, prostate, CC renal gland, small intestine, heart, trachea, thymus, lymph node, CC renal gland, small intestine, heart, trachea, thymus, lymph node, CC fibrosis and pancreatitis, for treating lipase deficiency in cystic CC fibrosis and pancreatitis, for treating undesirable clot formation CC such as myocardial infarction, during angioplasty and all surgical CC procedures that require decreased blood clot formation, for treating CC liver diseases, coagulation disorders and microbial diseases, for CC treating immune disorders, for treating inflammation and transplant CC rejection, for enhancing bone thickness and increasing bone density, CC or reducing the loss of essential ferroxidases, for suppressing CC apoptosis, and for regulating vascular smooth cell proliferation. They CC may also be used as vaccines.

                                                                                                        The sequence represents a cDNA which encodes the human caspase CC recruitment domain 12 (CARD-12) polypeptide. CARD domains are found in a CR number of proteins that transmit signals that activate apoptosis and CC inflammatory pathways in response to stress and other stimuli. Therefore, CC CARD-12 and its corresponding nucleic acid may be used in treatment and CC diagnosis of patients suffering from disorders associated with an CC abnormal level (an increase or a decrease) of apoptotic cell death or CC abnormal activity of stress-related pathways. The disorders include CC cancer, viral infections (e.g. caused by poxviruses, adenoviruses), CC autoimmune disorders (e.g. Alzheimer's disease, amyotrophic lateral CC selerosis), haematologic diseases (e.g. aplastic anamia, myocardial CC infarction, stroke), inflammatory and immune system disorders (e.g. caused by contact dermatitis, CC control disease, insulin-dependent diabetes, contact dermatitis, CC psoriasis, graft rejection), bacterial infections (e.g. tuberculosis, contact dermatitis, contact dermati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cancer; viral infection; poxvirus; adenovirus; autoimmune disorder; systemic lupus erythematosis; arthritis; neurological disorder; stroke; Alzheimer's disease; amyotrophic lateral sclerosis; haematologic disease; aplastic anaemia, myocardial infarction; inflammatory disorder; Crohn's disease; insulin-dependent diabetes; contact dermatitis; psoriasis; graft rejection; bacterial infection; lepromatous leprosy; tuberculosis; ischaemic brain injury; hypoxic brain injury; ss; kidney ischaemia; reperfusion injury; acute bacterial meningitis; excitotoxic brain damage; liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated caspase recruitment domain-12 polypeptide and nucleic acids encoding them, useful for treating and diagnosing disorders associated with abnormal apoptosis such as cancer, arthritis and Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  03-MAY-2001

                                                                                                                                                                      The present sequence encodes a human secreted polypeptide. The secreted polypeptides and polynucleotides are useful for treating nervous and muscular diseases, for inhibiting tumour formation and metastasis, for treating gastrointestinal ulceration, for preventing and treating diseases in spinal cord, thyroid gland, ovary, prostate, renal gland, small intestine, heart, trachea, thymus, lymph node, muscular system and colon, for treating lipase deficiency in cystic fibrosis and pancreatitis, for treating undesirable clot formation such as myocardial infarction, during angioplasty and all surgical procedures that require decreased blood clot formation, for treating liver diseases, coagulation disorders and microbial diseases, for treating immune disorders, for treating inflammation and transplant rejection, for enhancing bone thickness and increasing bone density, and for regulating vascular smooth cell proliferation. They may also be used as accines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-MAR-2000;

                        The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacterla, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess forensics, and for nutritional purposes. The present sequence is a cDNA of the present sequence of the present sequence is a cDNA of the present sequence.

         The sequence represents a genomic DNA which encodes the human caspase recruitment domain 12 (CARD-12) polypeptide. CARD domains are found in a number of proteins that transmit signals that activate apoptosis and inflammatory pathways in response to stress and other stimuli. Therefore, CARD-12 and its corresponding nucleic acid may be used in treatment and diagnosis of patients suffering from disorders associated with an abnormal level (an increase or a decrease) of apoptotic cell death or abnormal activity of stress-related pathways. The disorders include cancer, viral infections (e.g. caused by poxviruses, adenoviruses),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Caspase recruitment domain; CARD-12; apoptosis; stress related pathway; cancer; viral infection; poxvirus; adenovirus; autoimmune disorder; systemic lupus erythematosis; arthritis; neurological disorder; stroke; Alzheimer's disease; amyotrophic lateral sclerosis; haematologic disease; aplastic anaemia; myocardial infarction; inflammatory disorder; Crohn's disease; insulin-dependent diabetes; contact dermatitis; psoriasis; graft rejection; bacterial infection; lepromatous leprosy; tuberculosis; ischaemic brain injury; hypoxic brain injury; ds; kidney ischaemia; reperfusion injury; acute bacterial meningitis; excitotoxic brain damage; liver disease.
                                                                                                                                                                                                   Isolated caspase recruitment domain-12 polypeptide and nucleic acids encoding them, useful for treating and diagnosing disorders associated with abnormal apoptosis such as cancer, arthritis and Alzheimer's disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1192

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They cC rabbits, goats, horses, cats, dogs, chickens or sheep. They cC to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in cC immunosorbant assays (ELISA). Disorders which are disposed or treated include autoimmune diseases e.g. radioimmunoassays or enzyme linked cc include autoimmune diseases e.g. rheumatoid arthritis, created include autoimmune diseases e.g. neoplasms of the breast or liver, cc cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders (c.g., cerebral ischaemia, angiogenesis, nervous system disorders e.g. cardiovascular disorders e.g. cardiac arrest, viruses and fungical occupant of sorders e.g. corneal infection, and many other clisred in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before crease atood additive or preservative to increase or decrease storage can also the content of primary tissues.
capabilities, fat content, lipid, protein, carbohydrate, vitamins minerals, cofactors and other nutritional components. The present sequence encodes a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-DEC-2000;

The invention relates to an excessive ovulation animal, which is a transgenic animal with a totipotent cell containing a DNA fragment containing a promoter sequence and a gonadotropic hormone coding sequence. The DNA fragment is in the somatic cell chromosome. The excessive ovulation animal is useful for improving the productivity animals. The method can improve the productivity of a useful animal.

This sequence represents the cDNA sequence for the human neuronal CC apoptosis inhibitor protein (NAIP). This sequence was found on a region CC of the human chromosome 5q13. This sequence was isolated from a yeast CC artificial chromosome (YAC) contig containing the D5x435-D5x112 interval CC from the chromosome 5q13. Mutations in this gene, are causative of spinal CC muscular atrophy (SMA) types I, II, and III. SMAs are a group of CC autosomal recessive, neurodegenerative disorders. SMAs are classified CC into the three types based upon the age of onset (with type I being the CC severest form with the earliest age of onset). All three types are CC characterised by the degeneration of the alpha motor neurons of the Spinal cord manifesting as weakness and wasting of the proximal voluntary CC muscles. The most common mutations of this sequence are thought to be CC deletions of exons 5 and 6, and reductions in the copy number of the CC gene. This gene, (and primers and probes based on this gene) can be used CC for the diagnosis of SMA, and for directing the formulation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š

An additional coding sequence (AAT71264), including exon 14a (see also AAT71265 and AAT71266), was subsequently obtd. The NAIP DNA sequence including exon 14a appears to be a predominant gene isoform which is not deleted or mutated in spinal muscular atrophy (SMA) patients. The NAIP gene was mapped to 5q.13.1. NAIP (see also AAW20032 and AAW20033) is a negative regulator of apoptosis, partic. neuronal apoptosis and, when deficient or absent, contributes to neurodegenerative phenotypes such as SMA and amyotrophic lateral sclerosis.

The DNA fragment is in the somatic cell chromosome. The excessive ovulation animal is useful for improving the productivity animals. The method can improve the productivity of a useful animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

                                                                                                                                                                                       by hybridomas, prepared by fusing antibody-producing cells of mammals immunized with an immunogen containing residues 256-586 or 841-1052 of a 1403 residue amino acid sequence, fully defined in the specification, or their partial sequence, with a myeloma cell line. The monoclonal antibodies are for the study of apoptosis disease onset mechanism, disease diagnosis and development of drugs to prevent and treat apoptosis-related diseases. The quantitation method with the monoclonal antibodies is simple and accurate by using a biological specimen. This sequence encodes the human apoptosis inhibitory protein NAIP which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NAIP; apoptosis inhibiting protein; monoclonal antibody; diagnosis; apoptosis disease onset mechanism; drugs development; prevention;
